Flexible ceiling curtain track system

Home/Flexible Curtain Track Showing All 2 Results \$320.00 Add to the Cart \$4.75 Add to the Shopping Cart Buy Now Request Quote Track Dimensions: 7/16 Wide x 7/8 High Why Choose Our Flexible Curtain Track? Easy installation: Do-it-yourself-friendly; Just cut with a knife to size. High flexibility: bends at any angle to match the layout and curvature shape. Smooth glide: carries a significant payload. Durable: Patented structural design; Made of exceptional quality materials and excellent finishes. Easy to handle and store: Transportable or shop-capable in rolls. Can I use a flexible curtain track to run the app directly? No doubt our flexible curtain track can also be used for a direct run, but it will be different from a straight track because it has been spiraling up. In the direct launch of the app, we recommend installing the equipment at intervals of 9, at even intervals, to make it look better. All the mounting equipment needs to be lined up, the slightest from the set will result in a wavy track. When the directness of the track is a priority, we have an affordable cockpit curtain aluminum track. What parts are needed for each foot of the track? We recommend 4 rollers per foot track to avoid the curtain from hanging too much. For flexible curtain mounting equipment, we recommend one per foot for the curved track and the 9th interval for direct launch of the app. If the ceiling or wall is sharply curved, add additional installation equipment at the turning point. For an aluminum track, it needs 30 -36 each. How flexible are your tracks? Our tracks have metal plates built in, they are extremely flexible and can bend 90 degrees or more without any splicing, so sliders can move freely without interruption. The diameter of the circular standard track can be up to 12. Are your ceiling tracks installed or walls installed? Our tracks can be installed on ceilings or walls. We offer unique equipment for each of them. When placing an order, please indicate whether the app is designed to install a ceiling or a wall mount. What are your tracks and various components made of? The track and its parts are made of resin, which is very long. The metal plate built into the track is made of steel. Life expectancy is 2 decades. How long can I order one track? Do you sell connector pieces? Our tracks are up to 164ft continuously without any splicing or connectors. We don't sell connector pieces. What is the payload capacity of standard, medium and heavy tracks? The optimal weight support capacity is 40 pounds per foot of the standard track (4 rollers). Medium and heavy tracks are relatively larger. The hard surface of the material is greater or equal to 75 HA. The mitigation point is 80 degrees Celsius. Expected life is 2 decades. Can your tracks be bent in the shape of an S? How curved can your tracks be bent? Indeed, our tracks can be easily bent into S shapes as long as the mounting cartridges are positioned correctly. Our track tracks tend to be very flexible Can bend 90 degrees or more without any splicing, so that sliders can move freely without interruption. For example, the diameter of a circular standard track can be only 12. As for the direction of installments, click on the installation on our web. Curtain tracks are not all created equal - don't be tempted by cheap prices for a flimsy product.
